

# SynerGEE® Gas

## Vectren Case Study

Vectren Energy Delivery – Ohio (Vectren) enlisted Advantica to perform a facility and load update and model verification for its VEDO distribution model to help determine upcoming capacity improvement requirements and support gas control in the near term and long range supply.

Advantica delivered an updated and verified VEDO transmission and distribution model and an updated master customer database with load factors and assignment results. As a result of Advantica's solution, Vectren has the potential for **5-10% cost savings on future operational and capital expenditures**.

Advantica's model update and verification provided an accurate, detailed model that Vectren needed to confirm service requests by new customers and support field operations schedule required repair activities.
